### Burning the Ultimate Boot CD ISO to a CD with Nero SmartStart and Nero Express 6

### Contributed by Darren Jones

So, you've found the UBCD site, and downloaded the file (either ZIP or .EXE), and ended up with a large ISO file..... Now you need to burn it to a CD. This guide will show you how to do that, step by step, using Nero - in the screenshots I've used Nero 6.3.

Firstly, launch Nero SmartStart - this should be in your Start Menu under "Programs". It should look something like this below:

Ultimate Boot CD - Burning the Ultimate Boot CD ISO to a CD with Nero SmartStart and Nero Express 6

**Known Problems** 

How it all started

Acknowledgements User Feedback Useful Links

You Can Help!

Next, select the "Copy and Backup" icon in the top rom - it's the 5th one along, with the two CDs and little safe.

From this, we want the "Burn Image to Disc" option - click it, and Nero Express will start. You'll see two new windows appear. At the rear will be Nero Express, but as it knows you want to burn a CD from an image file, it will also open up a file selector window, which will allow you to choose the ISO file you've extracted - it will look like the window below.

Open		? 🗙
Look jn:	🕒 My Documents 💽 🔇 🤌 📴 🖽 🗸	
My Recent Documents Desktop My Documents	<ul> <li>Adobe</li> <li>Archives</li> <li>eBay</li> <li>Guitar Stuff</li> <li>Letters</li> <li>Manuals</li> <li>My eBooks</li> <li>My Music</li> <li>My Pictures</li> <li>My Videos</li> <li>Rally Stuff</li> <li>Scores</li> <li>Tangent Media</li> </ul>	
<b>S</b>	File <u>n</u> ame:	<u>O</u> pen
My Network	Files of type: All Nero compilations and Images	Cancel

Here, you can see that Nero Express is looking in the "My Documents" folder, and looking for "All Nero compilations and images". We need to change this, so click on the down arrow to the right of the "All Nero compilations and images" text, and you'll see something like the window shown below, with all the file types that Nero can use.

Ultimate Boot CD - Burning the Ultimate Boot CD ISO to a CD with Nero SmartStart and Nero Express 6

Desktop My Documents My Computer	Manuals My eBooks My Music My Pictures My Videos Rally Stuff Scores Tangent Media			
My Network	File name: Files of type:	All Nero compilations and Images CD-ROM (ISO) Compilation (*.nri) CD-ROM (MP3) Compilation (*.nr3) CD-ROM (WMA) Compilation (*.nr4) Audio CD Compilation (*.nr4) Audio CD Compilation (*.nra) Mixed Mode CD Compilation (*.nrm) CD EXTRA Compilation (*.nre) Video CD Compilation (*.nrv) Super Video CD Compilation (*.nrd) miniDVD Compilation (*.nrd) miniDVD Compilation (*.nrd) MID-BURN-Video Compilation (*.nrb) CD-ROM (Boot) Compilation (*.nrb) CD-ROM (EFI Boot) Compilation (*.nrb) CD-ROM (UDF) Compilation (*.nru) CD-ROM (UDF) Compilation (*.nru) CD-ROM (UDF) Compilation (*.nru) CD-ROM (UDF/ISO) Compilation (*.nrc) CD Image (*.nrg) HFS CD Compilation (*.nrf) All Nero compilations and Images Image Files (*.nrg;*.iso;*.cue) All Files (*.*)	<u>Open</u> Cancel	Exit

We want to select "Image files (\*.nrg, \*.iso, \*.cue)", so click on that.

Next, you need to navigate to wherever you extracted the ISO file to - this could be anywhere on your hard drive - only you will know where it ended up! Once you've navigated there, you should see something like the window shown below.

Open		?×
Look jn:	🗁 Apps 🕑 🔊 🗁 🛄 🗸	
My Recent Documents Desktop	Microsoft Visual Studio .net 2003 So Adobe Photoshop CS Tutorial.iso So Adode Photoshop CS.iso So Artistic Apps.iso So Fortres 101.iso So mso2000val1.iso So Photoshop 7 course.iso So readiris9pro.iso So Ultimate Boot CD v2.4.iso So Ultimate Boot CD v2.31.iso So winapps2000.iso	
My Computer		
<b></b>	File <u>n</u> ame: Ultimate Boot CD v2.4.iso	<u>O</u> pen
My Network	Files of type:         Image Files (*.nrg;*.iso;*.cue)         Image Files (*.nrg;*.iso;*.cue)	Cancel

Here, I've selected "Ultimate Boot CD v2.4.iso". You may find that the ".iso" isn't shown on your system - it depends on how you have it set up; personally I would recommend that you get Windows Explorer to show you file extensions (such as .iso) as it makes it easier to see what's going on with your system, but that's a different subject. Click "Open", and Nero Express will show a window similar to the one below, showing the image ready to burn, and the CD writer that you're going to use.

ኛ Nero Express		
Image recording Write a premastered image		20
Image file:	G:\ISOs\Apps\Ultimate Boot CD v2.4.iso	
<u>D</u> estination drive:	P: OPTORITE DVD RW DD0201 [CD-R/RW]	
<u>W</u> riting speed:	24x (3,600 KB/s)	
Number of copies: 1		
Nero	More >> S Back	<u>N</u> ext 🕥

Now click "Next", and Nero Express will start the burning process - you'll see a window similar to the one below.

🕂 0% Writing to disc	
Burning Process Please wait	Xo
Time       Event         BURN-Proof activated         Q       23:10:55         Caching of files started         Q       23:10:55         Caching of files completed         Q       23:10:55         Burn process started at 24x (3,600 KB/s)	
Current phase information Used read buffer: Process status: Total time	3% ne: 00:00:01

OPTORITE DVD RW D     Lead-in     Ready       Image: Control of the control of th	k 💽 Stop

Once Nero has finished, you'll have a bootable CD, and you can start using the UBCD!

This can be used to burn any "ISO" image file that you have, although the contents of ISO files can vary greatly (not all are Windows-compatible, and not all are bootable).

# Guide to burning UBCD with Nero 7 Ultra Edition

Contributed by Wayne Ziemer

Step 1: Download UBCD to a folder location that you can remember.

Step 2: Launch Nero SmartStart from either the desktop if you have the icon or the start menu.

### Step 3: Click "BACKUP" and select "BURN IMAGE TO DISC"

Step 4: On the left menu choose "IMAGE, PROJECT, COPY". Then in the right menu choose "DISC IMAGE OR SAVED PROJECT"

Step 5: Browse to the directory that has your UBCD ISO image from step 1. Double click on the image to select it.

Open	_										2 🔀
Look jn:	🗀 CD Images					~	G	1	P	•	
My Recent Documents	Smemtest86+ : Subcd33-basic.	1.60.iso .iso

Anial (CD TEXT)			
Language		×	
Number of copies:	Allow files to be added later (multisession disc)     Verify data on disc after burning		
	I wind make and when a second manifestal		

Step 7: Sit back, relax and wait for your UBCD to finish burning. When the burn is complete it will say "BURN COMPLETE". Simply press OK and then press NEXT and you are all done, the CD burner will now pop open and your disc will be ready to use.

# How to install Acronis True image on UBCDv4

	View previous topic :: View next topic						
Author	Message						
henryjfry	Posted: Wed Mar 14, 2007 12:36 pm Post subject: How to install Acronis True image on UBCDv4						
Joined: 14 Mar 2007 Posts: 8	Because this took me a while to get right and the answer came from outside this forum I thought I would post the solution here for any other interested parties.						
	1. Create the Acronis bootable cd as an iso image (or burn it to a cd) - I am using the "full" bootable as opposed to the "safe" bootable cd (i havent tried that yet)						
	somewhere						
	3. Extract the ubcd files from the iso image						
	4. Copy the acronis files into the ubcd\custom directory (I saved them in ubcd\custom\acronis)						
	5. Edit custom.cfg so that the entry for true image reads as follows						
	LABEL acronis						
	MENU LABEL Acronis True Image 10 Full						
	KERNEL /custom/acronisf/kernel.dat						
	APPEND initrd=/custom/acronisf/ramdisk.dat /S quiet vga=791 load_ramdisk=1						
	prompt_ramdisk=0 ramdisk_size=32000						
	6. Make the ubcd.iso as detailed elsewhere						
	7. Burn						
	Thats it

Ultimate Boot CD :: View topic - How to install Acronis True image on UBCDv4

Pasi	Posted: Thu Mar 15, 2007 9:28 am Post subject: I am new, so please, "Wich files"?
Joined: 15 Mar 2007	@henryjfry,
Posts: 3	Could you please tell me:
	<ul> <li>Which files "Extract the ubcd files from the iso image", please by name.</li> <li>Explain me "APPEND initrd=/custom/acronisf/ramdisk.dat /S quiet vga=791 load_ramdisk=1 prompt_ramdisk=0 ramdisk_size=32000"</li> </ul>
	For years I created and used my own boot Cd, because I didn't want to walk with a beg with diskettes. These days the diskettes are replaced by Cd's and/or Dvd's. For over 1 year I am searching for a tool which can boot iso's, so you can store several iso's on 1 Cd/Dvd. There are a lot of tools which say that you can boot a iso from, but I didn't find any tools who can, without severe Linux knowledge. Oke, I confess, I am a Dos/Windows guy!
	Last week I found the UBCD with the "how to add knoppix" story. To test the UBCD, if it could boot a iso, I tried several day's, but I couldn't boot my knoppix iso however. The iso's I want to boot are Winternals, Passware, Norton recovery, Disk Director Suite and
	Please help
	Regards
Back to top	Contraction (Contraction) (Con
henryjfry	Posted: Thu Mar 15, 2007 11:08 am Post subject: Dont know about booting iso's
Joined: 14 Mar 2007 Posts: 8	I am not so sure about booting iso's. Ubcd can be edited to boot certain software available as bootable cd's but that isnt't the same as booting an iso.
	- Which files "Extract the ubcd files from the iso image", please by name.
	All the files. When you download the ubcd iso you have to open up the iso with something like isobuster or even win rar. Then extract all the files in the root directory of what would be the cd if you burned it.
	<ul> <li>Explain me "APPEND initrd=/custom/acronisf/ramdisk.dat /S quiet vga=791 load_ramdisk=1 prompt_ramdisk=0 ramdisk_size=32000"</li> </ul>
	These are the kernel loading instructions that have to go into the acronis true image custom.cfg menu file (in the file /custom/custom.cfg). Acronis true image can be made into an iso and then burned to make a bootable cd. However the bootpart of the iso cant be run as a bot image. However luckily enough isolinux can boot the kernel upon which true image runs.
	I too am a dos/windows guy so anything to do with linux sends me straight to google.

Joined: 15 Mar 2007 Posts: 3	@VernDog, imG & imA files are the same. Just rename your '*.Img' file to '*.Ima' and it will boot in UBCD. @henryjfry & @victor Chew. Yes, I checked the original 'dosubcd.igz' file, but these files aren't made for reading. I think they started as small (readable) batch files and growed, in time, to a big mess (sorry) I did some testing: The variables are transferred (from Linux to DOS) with 'GetArgs.Com'. I now use these variables: APPEND initrd=/images/Boot1.ima Image_Dir=Ghost2 Batch=G.Bat "Boot1.Ima": is a small (720 Kb diskette) boot image, with only a 'Config.Sys' with some memory settings and an 'Autoexec.Bat' with only Cdrom and the GetArgs command. In stead of creating one BIG batch file (with an sub-menu for your config.sys/memory settings) for multiple programs, I create small 'Boot?.Ima' files, made just for 1 program. After you select your option in the UBCD menu, the program is started, there's no other sub-menu. "Image_Dir": variable where the (other) files are located. Ie, "/images/%Image_Dir%" "Batch=G.Bat": the batch files to be started in %Image_Dir%. All commands you can use in and after 'Autoexec.bat', and start your program. This way you can use bigger programs/tools, because there's no 2.8Mb (boot-diskette) limit to DOS programs.

# How to add windows setup/recovery console to UBCDv4

Author	Message
nenryjtry	Posted: Wed Mar 14, 2007 1:08 pm Post subject: How to add windows setup/recovery console to UBCDv4
Joined: 14 Mar 2007 Posts: 8	Again I was unable to find out how to do this with the documentation on this website but was eventually able to stumble across the solution.  1. Extract the ubcd files from the iso 2. Copy all the files from i386 off your xp setup cd into the root of the ubcd (ie /ubcd/i386) (If you just want a bootable recovery console I downloaded one some time ago as an iso with just the files required to run it, it is less than 10mb total. Unfortunately I have no idea now where i got it then.) 3. Get Bart's Bart's wxp10.zip: http://www.nu2.nu/download.php?sFile=wxp10.zip 4. From wxp10.zip copy w2ksect.bin win51 and win51ip to the root of ubcd 5. Go into i386 and delete bootfix.bin (unless you want to hit any key to boot from cd) 6. If for some reason you want more than one xp version on a disc rename i386 and then take a hex editor and replace any occurance of i386 in /w2ksect.bin and /i386/SETUPLDR.BIN with whatever you are naming your folder (probably a good idea to keep it short) this works fine with the recovery console only but i have no idea what additional settings would be required for a full xp install 7. In /custom.ctg add the entry for winxp recovery console LABEL recovery MENU LABEL XP Recovery Console
	KERNEL /w2ksect.bin APPEND
Back to top	Job done.

# HOWTO: Integrate DSL (Damn Small Linux) with UBCD V4

	View previous topic :: View next topic
Author	Message
lictor Chew	Posted: Mon Mar 19, 2007 11:39 pm Post subject: HOWTO: Integrate DSL (Damn Small Linux) with UBCD V4
oined: 21 Feb 2005 osts: 632	Here's how you can integrate Damn Small Linux into UBCD V4. The instructions are based on DSL V3.2, but should work with other versions as well. First extract the content of both DSL and UBCD to your harddisk. I am assuming the content of DSL is in c:\dsl, while the content of UBCD is in c:\ubcd.
	c:\dsl should have the following files/folders: Code: BOOT\ KNOPPIX\ LOST_FOUND\ index.html
	Now, copy "c:\dsl\KNOPPIX" to c:\ubcd, and copy c:\dsl\boot\isolinux\linux24 and c:\dsl\boot \isolinux\minirt24.gz to c:\custom. So c:\ubcd should look like this: Code:
	boot\ custom\ custom.cfg linux24

		Code:	
		MENU INCLUDE /menus/defaults.cfg LABEL back MENU LABEL KERNEL menu.c32 APPEND /menus/main.cfg LABEL dsl MENU LABEL DSL V3.2	
		APPEND ramdisk_size=100000 init=/etc/init lang=us ap initrd=/custom/minirt24.gz nomce noapic guiet BOOT IM	pm=power-off vga=791 AGE=knoppix
		Autor Dollars and another dates bool_in	
	Tha	's it! Create a customized UBCD image using "c:\ubcd\tools	\ubcd2iso\ubcd2iso.bat" and you
	are	ready to run DSL under "User-Defined Tools".	
	All t	he various options for booting DSL are found in "c:\dsl\boot	\isolinux\isolinux.cfg". I have
	take fb12	in the boot command from the label "dsl", but you are free t 280x1024 etc. to "c:\ubcd\custom\custom.cfd".	o add others eg. dsl-txt, expert,
	( <del>)</del>	wofile (

# HOWTO: Integrate Partition Magic V8 into UBCD V4

Goto page 1, 2 Next

a newtopic (a) postreply Ultimate Boot CD Forum Index -> Tutorials & How-Tos View previous topic :: View next topic Author Message Victor Chew ( quote Posted: Thu Mar 22, 2007 4:55 am Post subject: HOWTO: Integrate Partition Magic V8 into UBCD V4 Extract the content of UBCD to your harddisk. I am assuming the content of UBCD is in c:\ubcd. Joined: 21 Feb 2005 Posts: 632 Download pm8make.zip and extract to any folder. Follow the instructions in "readme.txt" to create a bootable 2.88MB disk image called pm8.img from two 1.44MB Partition Magic V8 rescue disk images. Move pm8.img to c:\ubcd\custom. Edit "c:\ubcd\custom\custom.cfg" with a text editor: Code: MENU INCLUDE /menus/defaults.cfg LABEL back MENU LABEL . KERNEL menu.c32 APPEND /menus/main.cfg LABEL dsl MENU LABEL Partition Magic V8.0 KERNEL memdisk APPEND initrd=/custom/pm8.img That's it! Create a customized UBCD image using "c:\ubcd\tools\ubcd2iso\ubcd2iso.bat" and you are ready to launch Partition Magic from "User-Defined Tools". 	When using isobuster to extract, make sure you select the Joliet icon (blue marked by ">>>")
	instead of the ISO icon (red marked by "ISO").
	Then select all the files/folders in the right window (should be all lowercase) and drag-and-drop
	them to the target folder in Windows Explorer.

# Floppy images

Author	Message	
njaniszewski2	Posted: Sat Jun 18, 2005 12:14 am Post subject: Floppy images	
oined: 17 Jun 2005 osts: 1	Hi there! I had some problems with creating floppy images using WinImage and Partition diskettes. I have found Virtual Floppy Drive and extracted it to some dir. Then i ran console (be pressing Win+R and 'cmd'), switched to VFD dir and ent 'vfd'. It will give you VFD own console, where you have to type: • install - it will install VFD driver in your system. You should see this: Ouote: [VFD] install Installed the Virtual Floppy driver. • start - it will start the driver. Ouote: [VFD] start Started the Virtual Floppy driver. • link 1 B - it will assign drive #1 to letter B. From now on you should be more floppy drive in My Computer - Floppy 5,25" B: Ouote: [VFD] link 1 B Drive 1 : B (Persistent) • now you can type status, what should give similar output: Ouote:	able to see one

HOWTO: Use DBAN on UBCD to Wipe a Hard Drive

Mirror Site #1 Mirror Site #2

**Mirror Sites** 

When disposing of a hard drive (or a computer containing a hard drive), the data on the hard drive should be securely deleted. Formatting or re-partitioning the hard drive will not do this properly - sensitive data can still be extracted using suitable software.

### Enter UBCD Forums

### Table of Content

Overview News Download UBCD Download CDR Labels Make a Donation Linking to UBCD Getting a Physical Copy Frequently Asked Questions Forums/Mailing Lists Tutorials Customizing UBCD Version History Known Problems You Can Help! How it all started <u>DBAN</u> (Darik's Boot & Nuke) is a utility to securely wipe a hard drive, by repeatedly over-writing the entire hard drive several times. DBAN is included on the <u>Ultimate Boot CD</u> (UBCD). This HowTo will describe how to use DBAN on UBCD to securely wipe a hard drive.

To start, boot from a UBCD bootable CD. This may involve changing the BIOS options to make the computer boot from CD.

Use the menus to select **Hard Disk Tools**, then **Wiping Tools**, then **Darik's Boot and Nuke**. Once DBAN has booted, you will be presented with the following screen:

http://www.dban.org/

- \* Press the F2 key to learn about DBAN.
- \* Press the F3 key for a list of quick commands.
- \* Press the F4 key for troubleshooting hints.
- \* Press the ENTER key to start DBAN in interactive mode.
- \* Enter autonuke at this prompt to start DBAN in automatic mode.

#### boot: \_

#### Autonuke

The easiest option is to type **autonuke**, then press **ENTER**. This will wipe any fitted hard drives, using the default options. The progress of each hard drive will be displayed in the main, lower part of the screen. The time taken, and an estimate of the time remaining, is displayed in the **Statistics** box. The screenshot below shows DBAN wiping two hard drives:

Darik's Boot and Nuke 1.0.7		
Options — Entropy: Linux Kernel (urandom) PRNG: Mersenne Twister (mt19937ar-cok) Method: DoD Short Verify: Last Pass Rounds: 1	Statistics Runtime: 00:01:19 Remaining: 05:45:47 Load Averages: 2.44 0.77 0.27 Throughput: 2079 KB/s Errors: 0	
(IDE 0,0,0,-,-) QEMU HARDDISK [00.36%, round 1 of 1, pass 1 of 3] [writ (IDE 0,0,1,-,-) QEMU HARDDISK [01.47%, round 1 of 1, pass 1 of 3] [writ	ting] [1031 KB∕s] ting] [1048 KB∕s]	

When DBAN is finished, it will display a message similar to the one below:

#### Interactive Mode

Interactive mode allows greater control. To start DBAN in interactive mode, just press **ENTER** at the DBAN start screen. When DBAN has started, you will be presented with the following screen:

Darik's Boot and Nuke 1.0.7			
Options Entropy: Linux Kernel (urandom) PRNG: Mersenne Twister (mt19937ar-cok) Method: DoD Short Verify: Last Pass Rounds: 1	Statistics Runtime: Remaining: Load Averages: Throughput: Errors:		
Disks and Par	titions		
I I (IDE 0,0,0,-,-) QEMU HARDDISK I I (IDE 0,0,1,-,-) QEMU HARDDISK			
P=PRNG M=Method U=Uerifu R=Rounds, J=U	n K=Down Snace=Select, F10=Start		

Use the up/down cursor and SPACE keys to select the hard drives and partitions to be wiped. If desired, you can select the pseudo-random number generator, wiping method, verification method and rounds. Each option has explanatory text when it is selected. When you are happy with the selected options, press **F10** to start wiping.

As with autonuke mode, when DBAN has finished, it will display a message. The CD can be removed and the computer powered off.
